EDUCATION

University of California, Berkeley

Bachelor of Science in Mechanical Engineering (3.6 GPA)

Berkeley, CA

August 2022 – May 2026

Pi Tau Sigma Mechanical Engineering Honor Society

Initiated after selection from top 25% of Junior class

Berkeley, CA

Initiated May 2025

Merrill F West High School

Space and Engineering Academy Graduate with Honors - Salutatorian (4.58 GPA)

Tracy, CA

Aug. 2018 – May 2022

SKILLS

Design: Computer-Aided Design, Finite Element Analysis, GD&T

Software: SOLIDWORKS, Onshape, Fusion 360, MATLAB, C++, Python, Git, Linux/UNIX, L^AT_EX, Google Workspace, Microsoft Office

Manufacturing: 3D Printing, laser cutting, soldering, water-jetting, CNC routing

General: Communication, interpersonal skills, teamwork, leadership, flexibility, resourcefulness

EXPERIENCE

Mechanical Engineer - Defense Technologies Engineering Division

Lawrence Livermore National Laboratory

June 2026 – Present

Livermore, CA

- Working as a Mechanical Engineer to help design, test, and validate hardware.

Payload Lead & Project Manager

Space Technologies & Rocketry

June 2024 – February 2026

Berkeley, CA

- Led the payload sub-team, ran meetings & events, headed project work, and worked with other leadership to meet club-wide goals.
- Created a club-wide workflow page in Notion to streamline tasks, timelines, budgets and documentation for multiple club projects.

Summer Student - Space Science & Security Program (SSSP)

Lawrence Livermore National Laboratory (LLNL)

May 2024 – August 2024

Livermore, CA

- Designed and successfully tested a novel design for wedgelocks in order to reduce lead times and manufacturing costs for the SSSP.
- Presented project work through a technical poster at the LLNL Summer Student Symposium.

PROJECTS

RF Lander Payload | *Project Management, Onshape, Project Documentation*

May 2025 – February 2026

- Led project work on a deploying payload designed to achieve an upright landing after separating from a rocket airframe and use a solar cell to power an antenna to relay vital system information back to the team.
- Managed project timelines, assigned team members tasks, supported team members, and collaborated with other club leads to integrate the payload into the club's LE3 rocket.

Wedgelock Redesign | *SOLIDWORKS, Rapid Prototyping, Project Management*

May 2024 – August 2024

- Created a single-part compliant device to mount printed circuit boards inside of mechanical enclosures.
- Created and presented a project poster at the Lawrence Livermore National Laboratory Summer Student Symposium.

KELSE-Y | *SOLIDWORKS, Assembly, Team Collaboration, Project Documentation*

August 2023 – May 2024

- Designed and manufactured a circulation system that removes carbon dioxide produced by yeast fermentation via a loop with a peristaltic pump and semi-permeable membrane.
- Worked with other subteams to integrate the circulation system and accompanying structure into the club's rocket Caldera (launched at Spaceport America Cup 2024).
